

**SETTING UP AND USING METRICS FROM MAXIMO TO SUPPORT
RELIABILITY CENTERED MAINTENANCE**

The objective of this training is to review the concepts and principles of Reliability Centered Maintenance (RCM) and setting up MAXIMO to support the results of the initial RCM study. With proper MAXIMO configuration and the continued use of data from MAXIMO experienced based adjustments can be made to an RCM driven maintenance program. The major topics and point of discussion are:

- * Understanding the use of RCM to adjust maintenance management process.
- * RCM methods for determining the correct level of maintenance for:
 - Operational Critical Equipment
 - High Risk Assets
 - High Risk Environmental Equipment
 - Maintenance Programs that support RCM such as PM, PdM and Condition Monitoring.
- * Discuss the data that should be in MAXIMO to support RCM.C
- * Discuss MAXIMO Configuration required to support RCM.
- * Review how to set up Condition Based Maintenance in MAXIMO that support RCM.
