

Setting up and fully using the Work Order and Equipment Modules in MAXIMO

This course will provide the understanding to develop sound business rules and processes that will allow the MAXIMO Work Order and Equipment Module functions to support the MAXIMO Work Management Process. The full use of the Equipment Module and the relationship with of the MAXIMO functions will be presented. MAXIMO “live” will be used to reinforce the materials presented. The following topics will be discussed:

- * Overview of the Work Order Module and considerations of Best Business Practices for using Work Requests, Work Orders and Quick Reporting.
- * Using Work Order Hierarchies to manage large projects .
- * Overview of Work Manager and its functionality.
- * Overview of the Equipment Module and relationship to other modules.
- * Best Practice for setting up Operating and Equipment Location Hierarchies.
- * Setting up Failure Codes and examples.
- * Setting up the Conditioning Monitoring functions and examples.
- * When and how to applying Routes for repetitive work.

The training material will include examples and provide guidelines in sufficient detail to allow the students to build their own program that will fit within their own culture and organization.
